2. The reason(s) why color photographs is/are necessary in this case is/are as follows:

Fig. 8(a) shows a comparison of single-photon and two-photon excited fluorescence of the dye molecule Coumarin-480 distributed evenly throughout a block of agarose gelatin. While Fig. 8(b) illustrates what is shown in Fig. 8(b) in a black-white drawing, Fig. 8(a) provides a much clearer understanding as the pictures show the colors of the light and the actual phenomena.

Applicants are including (in addition to ones previously submitted):

- (1) three sets of color drawings;
- (2) black and white photocopy of drawings; and
- (3) requested amendment to specification.
